

Enterprise Data Quality Monitoring Platform

Insurance | Detailed portfolio case study | Synthetic data

Executive summary

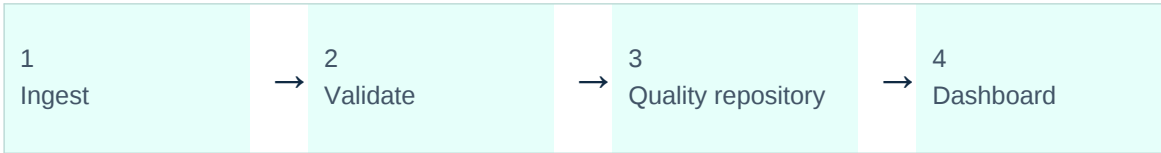

Centralised quality results, persistence logic, severity scoring and executive monitoring.

4.8M records/day	5,000 daily tests	76% less reporting effort	95% faster detection
---------------------	----------------------	------------------------------	-------------------------

Business challenge

Fragmented validation results made recurring failures difficult to identify and prioritise.

Solution architecture

Dashboard mockup

PORTFOLIO DASHBOARD	4.8M	5,000	76%	95%
	records/day	daily tests	less reporting effort	faster detection
	□□□□□□	● ● ● ○	▲ 12%	Status: Review

Illustrative dashboard wireframe. Values are synthetic.

Delivery approach

Inputs	Policy systems, Claims platform, Broker data, Customer hub
Technology	SQL, Python, Power BI, Snowflake, Databricks
Deliverables	• Monitoring data model • Validation layer • Persistence logic • Executive dashboard • Operating guide

Key considerations

The design prioritises traceability, clear definitions, appropriate human review, data quality and proportionate monitoring. Any production implementation would require validation against the organisation's data, operating model, policies and applicable requirements.

Portfolio note

This document uses generated data and representative scenarios. It contains no client-confidential information and does not make claims about actual production outcomes.
