

Data Migration Validation Framework

Insurance | Detailed portfolio case study | Synthetic data

Executive summary

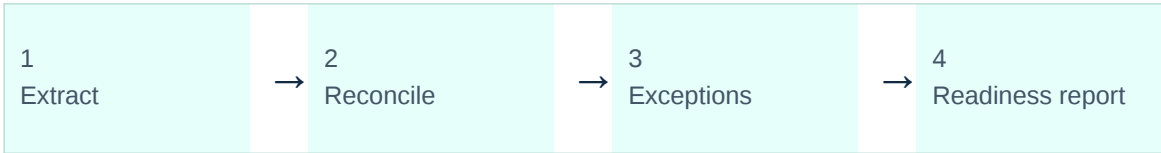

Built source-to-target reconciliation, field-level comparisons, exception management and readiness reporting.

2.4M records compared	98.9% initial match rate	320 exceptions triaged	100% critical fields tested
--------------------------	-----------------------------	---------------------------	--------------------------------

Business challenge

A source-system migration required traceable evidence of completeness, accuracy and consistency.

Solution architecture

Dashboard mockup

PORTFOLIO DASHBOARD	2.4M	98.9%	320	100%
	records compared	initial match rate	exceptions triaged	critical fields tested
	██████	● ● ● ○	▲ 12%	Status: Review

Illustrative dashboard wireframe. Values are synthetic.

Delivery approach

Inputs	Legacy source, Target platform, Reference data, Control totals
Technology	SQL, Python, Power BI
Deliverables	• Comparison queries • Control totals • Exception log • Readiness dashboard • Validation report

Key considerations

The design prioritises traceability, clear definitions, appropriate human review, data quality and proportionate monitoring. Any production implementation would require validation against the organisation's data, operating model, policies and applicable requirements.

Portfolio note

This document uses generated data and representative scenarios. It contains no client-confidential information and does not make claims about actual production outcomes.
