

Healthcare AI Risk Observatory

Healthcare | Detailed portfolio case study | Synthetic data

Executive summary

Created a structured taxonomy and review workflow to classify incidents, root causes and governance lessons.

420 reports screened	96 verified events	12 risk categories	8 regions
-------------------------	-----------------------	-----------------------	--------------

Business challenge

AI incident evidence was fragmented across public reports, research and regulatory sources.

Solution architecture

Dashboard mockup

PORTFOLIO DASHBOARD	420	96	12	8
	reports screened	verified events	risk categories	regions
	██████	● ● ● ○	▲ 12%	Status: Review

Illustrative dashboard wireframe. Values are synthetic.

Delivery approach

Inputs	Public reports, Research papers, Regulator notices, Incident databases
Technology	Python, Power BI, Responsible AI
Deliverables	• Risk taxonomy • Evidence workflow • Incident dataset • Trend dashboard • Lessons library

Key considerations

The design prioritises traceability, clear definitions, appropriate human review, data quality and proportionate monitoring. Any production implementation would require validation against the organisation's data, operating model, policies and applicable requirements.

Portfolio note

This document uses generated data and representative scenarios. It contains no client-confidential information and does not make claims about actual production outcomes.
